WHAT IS BITCOIN QUICK ?

Bitcoin Quick is a cryptocurrency, based on blockchain technology. It works on ethereum platform as a smart contract ERC-20 token. In this way our cryptocurrency transaction is 10 times faster than normal bitcoin transaction. Our cryptocurrency transaction fees are also very low when you compare with bitcoin transaction fees. You can adjust transaction fees with **gas price** feature on our cryptocurrency. A bitcoin quick transaction can complete in less than 3 minutes with lowest transaction fees that belows 10 cents. You can send any amount (1 billion or 1 single cent) but transaction fee is same and less than 10 cents.

Features of bitcoin quick:

Decentralized

Make transactions with complete freedom. No goverments, no banks and no restrictions

Fastest P2P transactions

Send money to anyone in less than 3 minutes. 10 times faster than normal bitcoin

Lowest transaction fee

You can send any amount. But fee is same and less than 10 cents per transaction

Open source

Our cryptocurrency works on blockchain technology and it's 100% open source. You can checkout **Bitcoin Quick's** source code [here](#)

Secure

It works on blockchain technology. So, no one can manipulate your funds without your **private** key.

Bitcoin & Bitcoin Quick technical comparision:

Feature	Bitcoin	Bitcoin Quick
Block time	10 minutes	15 seconds <i>That means, sometimes transactions can complete in less than 1 minute</i>
Smart contracts	No	Yes <i>Developers can easily integrate Bitcoin Quick on their apps/software</i>

BITCOIN QUICK VS. OTHER PAYMENT SYSTEMS

	 Bank	 PayPal	 Bitcoin	 Bitcoin Quick
Government control	Yes	Yes	No	No
International transaction processing time	Upto 7 days	1 minute	30 minutes	3 minutes
Transaction fees	Upto 50 USD	2.9% to 4.4%	Below 5 USD	Below 10 cents
Restrictions on deposits/withdrawals	So many	Yes	No	No
Freedom on account and transactions	No	No	Yes	Yes
Funds security	Yes	Yes	Yes	Yes
Open Source	No	No	Yes	Yes

Traditional banking systems

There are lot of restrictions and limitations on bank accounts. There is no 100% freedom on accounts and transactions. Even banks are also don't have freedom. Because they are controlled by governments. Even [demonetisation](#) is also possible with goverments.

Online payment systems

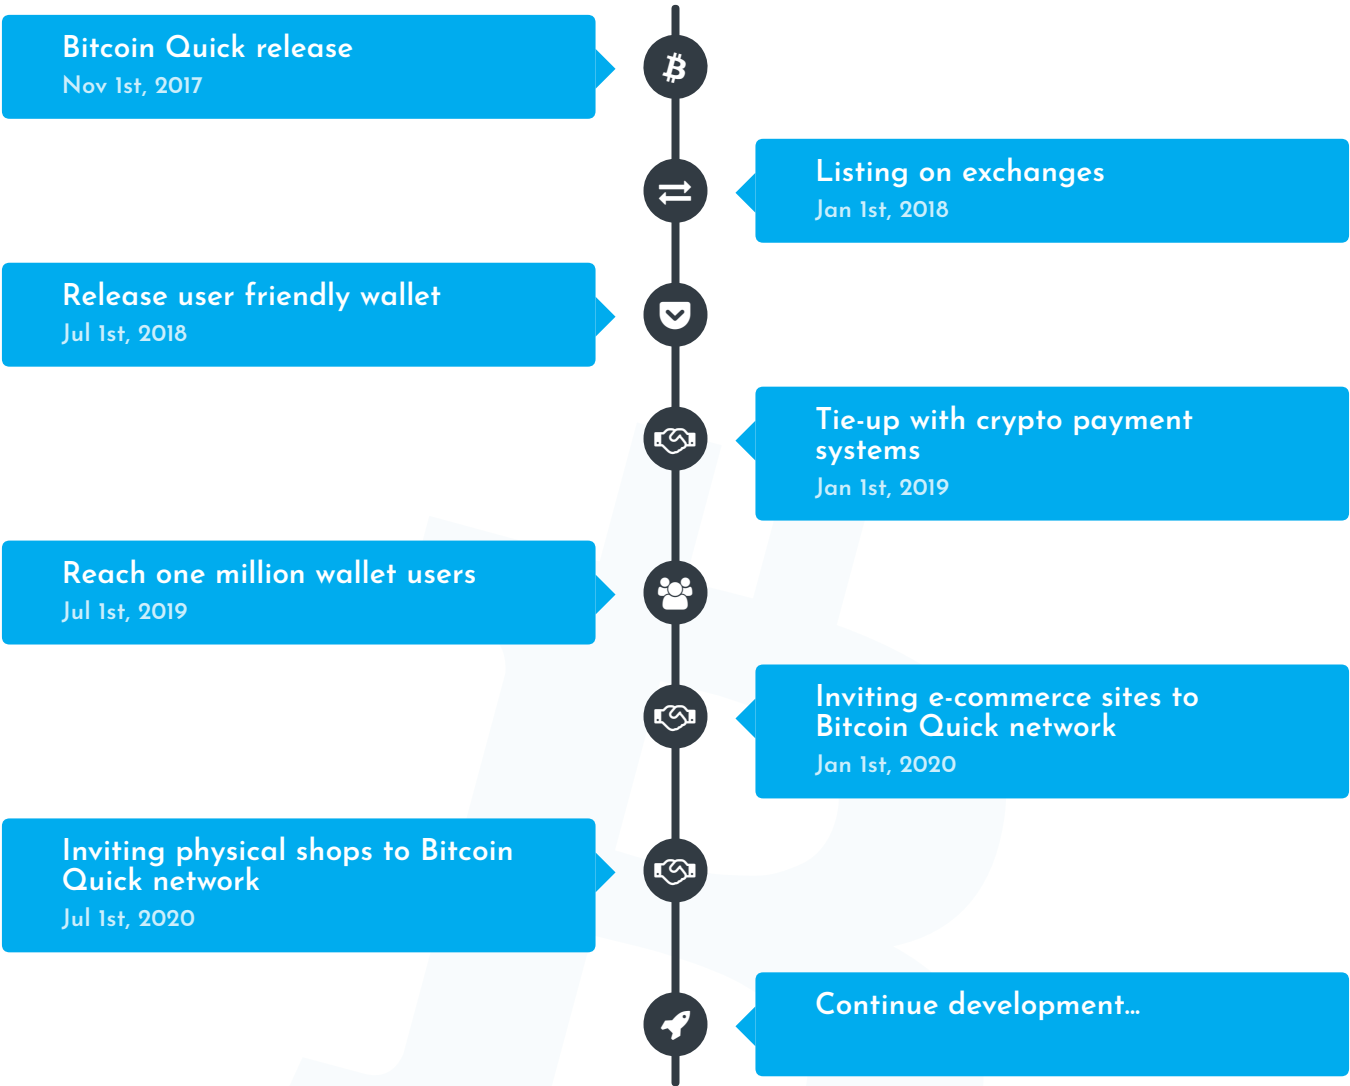

Online payment systems are better than banks to make internatinal transactions. But, they are taking very huge fees for transactions. Also, there are lot of limitations and restrictions on accounts and transactions.

Bitcoin

Bitcoin is first cryptocurrency and it's definetly better than traditional banking and online payment systems. But, there transaction speed is horrible. Some times bitcoin transaction will take multiple days to complete. Also, there transaction fees is little bit high. For more infomration please see [this](#) website.

ROADMAP

BITCOIN QUICK WALLET

Bitcoin Quick's main aim is bring cryptocurrency to common people and make them to participate and start using it on their daily life.
