SUP Supercharged With Pokereum Demo, Other DAPP rewards & New Pre-sale Only Funding Round.

Pokereum DEMO release by SuperDAO

Organizational Update, State of Dapps and Pre-Sale

We are using this opportunity to provide a generalized update since communications were sub-par since the expansion of our organization. The technical team ramp-up requirements and specialized work on new stealth media Dapp has especially taken a hit on communications. Notwithstanding, we have gained more compounded value from the time spent ramping up as a team consequently providing better outlook for SUP token value. SUP Holders/Backers will now have full benefits of our strategy that will reward early participation. The following are the benefits

- Increased Utility of SUP within multiple Dapps
- Multiple rewards from multiple Dapps

- Extra token allocation for early participators

We have taken steps to modify our funding rounds to a “Pre-ico” or “Pre-sale” only efforts, cutting down on the time needed to market an “ICO” and to remain focused on development. Inadvertently the pre-ico only model will also reward only the most active participators with bonuses and benefits as we minimize the prominence of passive token holders in the organization. We need to reward the most active and earliest participators to reduce the influence of voting apathy among our crowd governed organization

Benefits / Rationale for pre-sale only

- Most active early participants are incentivized in governance of organization at deployment onward.
- Focus on Dapp development and delivery
- Reward Early backers heavily

Increased Sup Utility and Holding incentive

- SUP is used as reputation staking mechanism in our Pokereum jury pool system and those in the jury pool that are selected through a lottery will receive rewards for their contribution.
- An ‘active’ holder of SUP can collect excess value generated from the generalized Pokereum network in the form of rewards / ETH
- SUP is used as reputation in the media dapp to be announced
- SUP is used as a means to collect rewards on the media dapp network

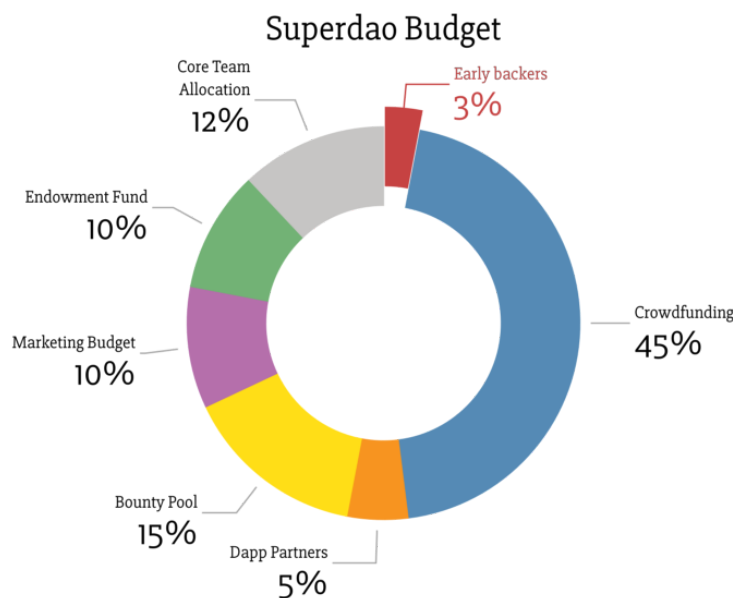

What to look forward to

- SUP bounty program: [Mid December 2017]
- Pokereum Shadow Poker [mental poker] release on Ethereum Testnet : [Jan / Feb 2018]

- Intermediate deployment of SuperDAO framework enabling core team and token holders vote on organization : [Feb 2018]
- Safety hatch enabled Stealth dapp “Harvester” network release consisting of :["Chronos" : Collaborative Collation environment] & ["Kairos" : miner to mine/Harvest.] [Feb/March 2018]

Bonus incentive : 45% or 45 Million Tokens SUP Stake Distribution

The mention of our “Harvester” network is of vital importance as it pertains to the new distribution mechanism of 45% of SUP tokens, previously scheduled for distribution by crowdfunding. The catch is that only current holders of SUP token acquired through pre-sale will be able to mine these token using their Superneum (SUP) as a staking mechanism.

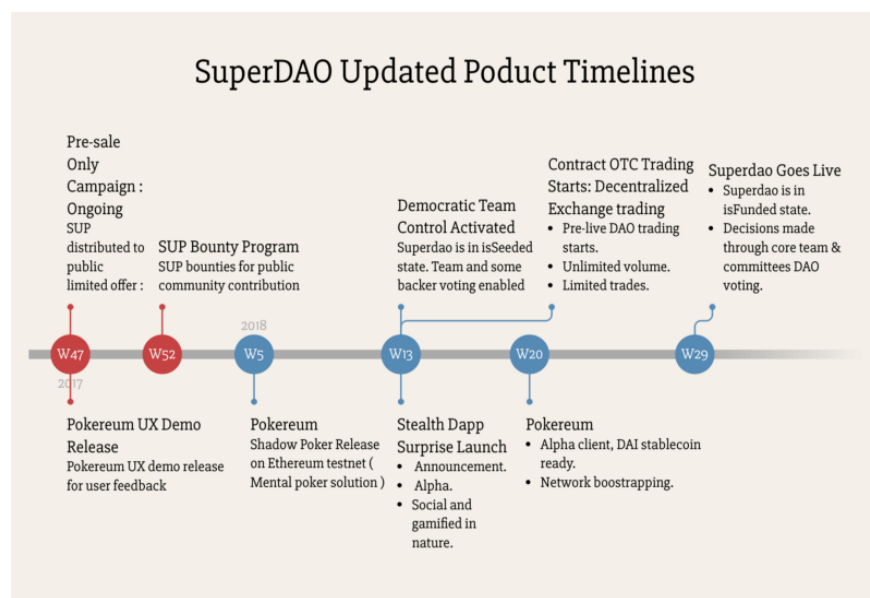

45% Superneum (SUP) to be acquired using a SUP staking mechanism

Tentatively, other means of distribution might be investigated and added as needed, but the stake based mining of SUP remains the primary means by which the 45% of the rest of SUP tokens are disbursed. Superneum (SUP) tokens acquired now will be used as a staking and reputation system within our new dapp to be announced. This means that in addition to organization SUP mining rewards, the

new dapps' native currency will also give holder of SUP a two for one bonus benefit over previous expectations. The SUP mining reward incentive in addition to the new dapps native currency will Help bootstrap the mining network to be announced. But the net result is an early active majority SUP token holders who are more likely to participate in democratize processes of the SuperDAO : a crowd governed organization, while limiting apathetic SUP holders to an extent.

Adjusted Timelines

Superdao-updated-product-timelines

Conclusive Summary

- 45 million Superneum (SUP) tokens previously scheduled for crowdfunding, are now awarded to token holders through stake mining [Must own SUP now], and they will bootstrap our harvester network in the new dapp to be announced.
- While waiting for our first product [Pokereum] to mature in technology during its development life cycle, we will bring a live real world problem solving, production ready, revenue generating dapp to the market that will be a tremendous value add to end users and doubly so for SUP token holders doubling SUP holding incentive.

- Own a small amount of tokens now with a small bonus and an additional 2 for one reward later, since SUP is used as a staking mechanism in two dapps as well as to earn more SUP.
- Small bonus SUP tokens for providing Pokereum demo review, see below:

Bonus Opportunity : Pokereum demo:

We have recently released our Pokereum UX demo for public feedback before technical progression, instead of building it all out. We want the community to have a say in the evolving process.

If you provided some feedback and also contribute to our pre-sale, you can double your SUP. Please keep your pre-sale contributions addresses safe as they will be used to award you extra tokens based on feedback. You can play with the Demo here: <http://demo.pokereum.io/> and provide your feedback here : <https://goo.gl/forms/zneJgcZI6eQvXR842>

Claim Superneum (SUP) Tokens:

We have created a nifty, easy to use, Metamask dependent tool and a tutorial to aid early pioneers in acquiring our tokens here : <http://claim.superdao.io/> . The following tutorial to acquire your SUP tokens : <https://blog.superdao.io/superdao-pioneers-new-claim-tool-for-early-access-to-superneum-tokens-e7c8b53d803>.

Alternatively, if you do not want to use Metamask, you can with your local Ethereum node and or Myetherwallet : you can follow this tutorial promissory tokens to claim your SUP tokens.
